Learning Bodies n a Hent PDF Is the body a mere container of learning processes? Or can we, in a productive way, develop an approach to learning that includes learning as a bodily phenomenon? The authors all work with the development or refinement of theories of 'learning bodies', and in this anthology they present the state of the art to anybody with an interest in current scientific discussions about the interplay between body, movement and learning. A full understanding of learning in all its complexity requires that the body is taken into account? regardless of whether we are dealing with the neurological foundations of learning processes, skill acquisition, mental health and illness, aesthetics or the physical setting where the learning takes place.

Body, movement and senses (in short: corporeality), provide the necessary experiences for change and development in relation to life-long learning. This anthology presents a range of theoretical approaches to learning; neuroscience, psychiatry, sociology, psychology, phenomenology and pedagogy. By presenting this range of approaches, the anthology raises a central question in the philosophy of science: the need for incorporation of different approaches to achieve further insights.
